

Crawl For Alternative Data To Drive Innovation and Stewardship (CADDIS)

Crawl For Alternative Data To Drive Innovation and Stewardship (CADDIS) is automation technique to extract diverse unorganised web data, products, texts, or multimedia into manageable and customizable format for any business size. CADDIS streamlines the process, clean, label and structure data that tailored to your specifications without complicated software to use.

Easy Setup

Highly Versatile

Model Training & Evaluation

Data Labeling

Ensure anonymity

Real-time data

Controllable & Explainable

High Quality Data

Key Highlights

- Collect diverse data, text or multimedia, from various sources (Social Media, News Sites etc.)
- Distinguishes between correct and incorrect information, to provide quality, reliable information.
- Organises and categorises collected data for easier and quicker access for downstream tasks.
- Allows humans to manually correct the labelling at selected checkpoints, from which the AI learns and improves its accuracy over time.

Use cases:

Jobs & Human Capital

Sourcing and identifying top talents for your company.

Retail & Ecommerce

Stay ahead of competition by monitor products.

Housing & Real Estate

Stay current with latest housing market trend.

Travel & Hospitality

Bring data from travel websites to your fingertips.

Research & Journalism

Power next research, article or research project.

Social Media

Decide what's best for your follower based on the trends.
